What is equipment monitoring? [-]

Equipment monitoring uses real-time technology to track the condition, performance, location, and utilization of physical assets, such as vehicles, trailers, and equipment. It provides real-time visibility into how equipment is operating, helping businesses improve efficiency, reduce downtime, and address issues before they lead to failures.

Samsara's Equipment Monitoring solution gives operations teams comprehensive asset visibility

- **Get the most out of every asset:** Unlock revenue with comprehensive asset visibility, avoid unnecessary purchases by reallocating underutilized assets, keep jobs on track with the right assets in the right place, and improve scheduling and billing accuracy to prevent financial losses.
- **Catch and address maintenance issues early:** Reduce costs with digital workflows, save time by automating inspections and issue reports, prevent emergency repairs by addressing issues as they occur, and extend asset lifespan with preventive maintenance programs.
- **Prevent theft and recover lost assets:** Prevent loss with real-time tracking and anti-theft tools, track and locate any asset anywhere, detect theft through movement and tampering alerts, and recover stolen assets with ultra discreet tracking.
- **Help operators work safely and efficiently:** Mitigate risks with guided workflows and mobile training, streamline training with custom courses, protect operators with critical safety content in the field, and ensure compliance by digitizing forms and checklists.
